

# Wichtiger Hinweis !

Wir weisen darauf hin, dass bei längerer Aufstellzeit des Stativs in Räumen mit geringer Luftfeuchtigkeit ein Nachtrocknen des Holzes einsetzt. Deshalb ist es erforderlich, die Feststellschrauben für die Stativbeinauszüge täglich auf ihre Klemmung zu kontrollieren und ggf. nachzuziehen, um ein unbeabsichtigtes Zusammenschieben der Stativbeine (und damit verbundenes Umfallen des Stativs) zu verhindern.

## **Important advice !**

Please note that the wood will begin to dry if the tripod is set up and left Standing in a low-humidity room over a lengthy period of time. It is therefore advisable to check the screws locking the extended tripod legs, and to tighten them if necessary so äs to prevent the tripodlegs from collapsing unintentionally.
